EDUCATION

Asia Pacific University of Technology and Innovation (APU)
Bachelor of Computer Science (Hons) (Artificial Intelligence)

- Internship Window:** Start between 29th June – 27th July 2026 (16 weeks)
- GPA:** 3.89
- Completed Coursework:** AI Methods, Programming for Data Analysis, Object-Oriented Development (Java)
- Current Coursework:** Imaging & Special Effects, Concurrent Programming, Data Structures

Expected: July 2027
Kuala Lumpur, Malaysia

TECHNICAL SKILLS

Programming: Python (Advanced), Java (OOP), C++ (Data Structures), Assembly (NASM), R

Artificial Intelligence: Feature Extraction, Data Lifecycle, OpenCV, Prompt Engineering, Workflow Automation

Systems & Web: ASP.NET, System & Network Administration, Concurrent Programming (Java)

Tools & Logic: GitHub, VS Code, ApacheNetbeans, Data Structures, Large Language Models (ChatGPT, Gemini)

PROJECTS

Automated Image Recognition Tool

- Engineered a Python-based automation workflow using OpenCV visual triggers to execute multi-step logic sequences in real-time environments
- Improved system stability by testing and adjusting logic gates to account for data inconsistencies.

Python & OpenCV | Independent Project

Airport Traffic Control Simulation

- Developed a multi-threaded simulation to manage concurrent airport operations using Java.
- Engineered complex system logic, thread synchronization, and resource management to prevent deadlocks in a high-concurrency environment.

Java | Concurrent Programming

Industrial Web Application Design

- Designed the navigational structure and database schema (ERDs) for a scalable web application.
- Collaborated in a team environment to develop wireframes and functional prototypes for user-centric systems.

ASP.NET | Web Applications

RESEARCH EXPERIENCE

Asia Pacific University of Technology and Innovation (APU)
Group Assignment

- Co-authored a research paper “*Optimization of Ant Colony Optimization Parameters for the Traveling Salesman Problem*”.
- Evaluated the interaction between pheromone influence, heuristic influence, and evaporation rates using the **TSPLIB eil51 dataset**.
- Analyzed solution quality and convergence behavior to identify optimal parameter tuning for reducing premature convergence in optimization tasks.

Kuala Lumpur, Malaysia
AI Methods | 2025

Individual Assignment

- Conducted a literature review on Python-based automation and image recognition frameworks for industrial applications.
- Analyzed the competitive landscape of AI foundation models, focusing on data curation and model experimentation methodologies.

Research Methods For Computing And Technology | 2026
